

Creating Student Collection
`db.createCollection("students")`

Student Collection Insert
`db.students.insert({Rollno: 11, Name: "ABC", ContactNumber: "17819900990099", Email: "abc@gmail.com", age: 21})`

Update Email ID of Rollno 10
`db.students.update({Rollno: 10}, {$set: {EmailId: "cde@gmail.com", age: 21}})`

`db.students.find()`

Update Name of Rollno 11
`db.students.update({Rollno: 11, Name: "ABC"}, {$set: {Name: "JCM"}})`

`db.students.find()`

Export Collection

`mongoexport --host localhost --db students --collection students --type=csv --out students.csv --fields Rollno, Name, ContactNumber, EmailId, Age`

Drop Collection

Use `students`

`db.students.drop`

Import Collection

`mongoimport --host localhost --db students --collection students --type=csv --file students.csv --headerline`

②

~~#~~ View collection after importing
db.Students.find()
